

Datasheet for ABIN2533008

EOMES ELISA Kit

Overview

Sensitivity:

Overview	
Quantity:	96 tests
Target:	EOMES
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA
Product Details	
Purpose:	Human Eomesodermin ELISA Kit is a sandwich ELISA kit for use with Tissue homogenates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Eomesodermin (EOMES) No significant cross-reactivity or interference between Eomesodermin (EOMES) and analogues was observed.
Sample Type:	Tissue Homogenate
Analytical Method:	Quantitative
Detection Method:	Colorimetric
	This assay has high sensitivity and excellent specificity for detection of Eomesodermin

(EOMES)

< 0.115 ng/mL

Target Details

Storage:

Expiry Date:

Storage Comment:

Target:	EOMES
Abstract:	EOMES Products
Pathways:	Stem Cell Maintenance
Application Details	
Application Notes:	Stability: The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5 % within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled It is also strongly suggested that the whole assay is performed by the same user throughout. Recommended dilutions: Optimal dilutions/concentrations should be determined by the end user. Standard Form: Lyophilized
Comment:	The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5% within the expiration date under appropriate storage conditions minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout.
Plate:	Pre-coated
Restrictions:	For Research Use only
Handling	

4 °C/-20 °C

6 months

Upon receipt, store the kit according to the storage instruction in the kit's manual.
