CRNN ELISA Kit

V

Quantity:	96 tests
Target:	CRNN
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	0.312 ng/mL - 20 ng/mL
Minimum Detection Limit:	0.312 ng/mL
Application:	ELISA
Product Details	
D	
Purpose:	Human Cornulin ELISA Kit is a sandwich ELISA kit for use with Tissue homogenates, cell lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was observed.
Sample Type:	lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was
	lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was observed.
Sample Type:	lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was observed. Cell Lysate, Tissue Homogenate
Sample Type: Analytical Method:	lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was observed. Cell Lysate, Tissue Homogenate Quantitative
Sample Type: Analytical Method: Detection Method:	lysates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Cornulin (CRNN) No significant cross-reactivity or interference between Cornulin (CRNN) and analogues was observed. Cell Lysate, Tissue Homogenate Quantitative Colorimetric

Target Details

Target:	CRNN
Abstract:	CRNN Products
Application Details	
Application Notes:	Stability: The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5 % within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout. Recommended dilutions: Optimal dilutions/concentrations should be determined by the end user. Standard Form: Lyophilized
Comment:	The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5% within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout.
Plate:	Pre-coated
Restrictions:	For Research Use only
Handling	
Storage:	4 °C/-20 °C
Storage Comment:	Upon receipt, store the kit according to the storage instruction in the kit's manual.
Expiry Date:	6 months
