Target Details

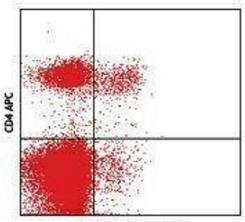

Target:	IKZF2
Alternative Name:	Helios (IKZF2 Products)
Background:	Helios is a member of the Ikaros family of zinc finger transcription factors. It contains a C-
	terminal region composed of 2 zinc-finger domains that mediate dimerization between the
	family members. Helios was originally cloned from a mouse thymoma line. It is mainly
	expressed in peripheral T cells and thymocytes. It is found at high levels in a subpopulation of

Overexpression of Helios profoundly alters $\alpha\beta$ T cell differentiation and activation. It has been determined that silencing of Helios in B cells is critical for maintaining normal B cell function. Helios is also involved in tumor immunity.
