Target Details

Target:	CD44 Standard (CD44s)
Alternative Name:	CD44H (CD44s Products)
Background:	CD44 is an 80-95 kD cell surface glycoprotein. It is expressed on all leukocytes, endothelial
	cells, hepatocytes, and mesenchymal cells. It is up-regulated when T cells and B cells are
	activated. It was reported that CD44 is a valuable marker for memory T cells. CD44 is an
	adhesion molecule involved in leukocyte adhesion and homing to lymphoid organs. The OX-49

The epitope recognized by OX-49 antibody has been mapped to a region on both the standard, CD44s, and the splice variant, CD44v, isoforms of CD44. However it was reported that OX-49 antibody cannot detect the CD44V isoform, possibly due to conformational changes in the epitope.
