## Target Details

Target:	VBP1 (PFDN3)
Alternative Name:	Pfdn3,vbp1 ( <a href="#">PFDN3 Products</a> )
Background:	The protein encoded by this gene interacts with the Von Hippel-Lindau protein to form an intracellular complex. The encoded protein functions as a chaperone protein, and may play a role in the transport of the Von Hippel-Lindau protein from the perinuclear granules to the nucleus or cytoplasm. Alternative splicing and the use of alternate transcription start sites results in multiple transcript variants encoding different protein isoforms.
