## Target Details

Target:	TLK2
Alternative Name:	Tlk2 ( <a href="#">TLK2 Products</a> )
Background:	<p>This gene encodes a nuclear serine/threonine kinase that was first identified in Arabidopsis. The encoded protein is thought to function in the regulation of chromatin assembly in the S phase of the cell cycle by regulating the levels of a histone H3/H4 chaperone. This protein is associated with double-strand break repair of DNA damage caused by radiation. Pseudogenes</p>

## Target Details

	of this gene are present on chromosomes 10 and 17. Alternate splicing results in multiple transcript variants.
Molecular Weight:	85.3 kDa
