Abstract:	CPNE1 Products	
Background:	Calcium-dependent membrane-binding proteins may regulate molecular events at the interface	
	of the cell membrane and cytoplasm. This gene encodes a calcium-dependent protein that also	
	contains two N-terminal type II C2 domains and an integrin A domain-like sequence in the C-

terminus. However, the encoded protein does not contain a predicted signal sequence or transmembrane domains. This protein has a broad tissue distribution and it may function in membrane trafficking. This gene and the gene for RNA binding motif protein 12 overlap at map location 20q11.21. Alternate splicing results in multiple transcript variants encoding different proteins.
