# Target Details

Purity:

Target:	CPNE1
Alternative Name:	Copine-1 (CPNE1 Products)
Background:	Calcium-dependent membrane-binding proteins may regulate molecular events at the interface of the cell membrane and cytoplasm. This gene encodes a calcium-dependent protein that also contains two N-terminal type II C2 domains and an integrin A domain-like sequence in the C-terminus. However, the encoded protein does not contain a predicted signal sequence or

transmembrane domains. This protein has a broad tissue distribution and it may function in
membrane trafficking. This gene and the gene for RNA binding motif protein 12 overlap at map
location 20q11.21. Alternate splicing results in multiple transcript variants encoding different
proteins.

Molecular Weight: 58.9 kDa

NCBI Accession: NP\_690905

## **Application Details**

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
