Datasheet for ABIN2712574 CRYbA2 Protein (Transcript Variant 1) (Myc-DYKDDDDK Tag)

Overview

Image

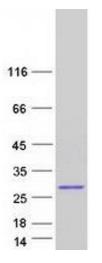

0 / 01 / 10 / /	
Quantity:	20 µg
Target:	CRYbA2
Protein Characteristics:	Transcript Variant 1
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CRYbA2 protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	 Recombinant human Crystallin, beta A2 (CRYBA2), transcript variant 1 (transcript variant 1) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	CRYbA2
Abstract:	CRYbA2 Products
Background:	Crystallins are separated into two classes: taxon-specific, or enzyme, and ubiquitous. The latter class constitutes the major proteins of the vertebrate evel, which function to maintain the

class constitutes the major proteins of the vertebrate eye, which function to maintain the

transparency and refractive index of the lens. Since lens central fiber cells lose their nuclei

	during development, these crystallins are made and then retained throughout life, making them
	extremely stable proteins. Mammalian lens crystallins are divided into alpha, beta, and gamma
	families beta and gamma crystallins are also defined as a superfamily. Alpha and beta families
	are further divided into acidic and basic groups. Seven protein regions exist in crystallins: four
	homologous motifs, a connecting peptide, and N- and C-terminal extensions. Beta-crystallins,
	the most heterogeneous, differ by the presence of the C-terminal extension (present in the
	basic group but absent in the acidic group). Beta-crystallins form aggregates of different sizes
	and are able to form homodimers through self-association or heterodimers with other beta-
	crystallins. This gene is a beta acidic group member. Three alternatively spliced transcript
	variants encoding identical proteins have been reported.
Molecular Weight:	21.9 kDa
NCBI Accession:	NP_005200
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
Handling	
Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze

Western Blotting
