Target Details

Target:	CELF1
Alternative Name:	Cugbp1 (CELF1 Products)
Background:	Members of the CELF/BRUNOL protein family contain two N-terminal RNA recognition motif (RRM) domains, one C-terminal RRM domain, and a divergent segment of 160-230 aa between
	the second and third RRM domains. Members of this protein family regulate pre-mRNA alternative splicing and may also be involved in mRNA editing, and translation. This gene may

Target Details

	play a role in myotonic dystrophy type 1 (DM1) via interactions with the dystrophia myotonica- protein kinase (DMPK) gene. Alternative splicing results in multiple transcript variants encoding different isoforms.
Molecular Weight:	51.4 kDa
NCBI Accession:	NP_941989
Pathways:	Ribonucleoprotein Complex Subunit Organization

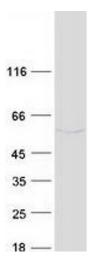

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
