Target Details

Target:	Cullin 4B (CUL4B)
Alternative Name:	Cullin-4b (CUL4B Products)
Background:	This gene is a member of the cullin family. The encoded protein forms a complex that functions as an E3 ubiquitin ligase and catalyzes the polyubiquitination of specific protein substrates in the cell. The protein interacts with a ring finger protein, and is required for the proteolysis of several regulators of DNA replication including chromatin licensing and DNA replication factor 1

Target Details

	and cyclin E. Multiple transcript variants encoding different isoforms have been found for this gene.
