## Target Details

|                     | (HOMGO). HOMGO is a progressive renal disease characterized by primary renal magnesium<br>wasting with hypomagnesemia, hypercalciuria and nephrocalcinosis associated with severe<br>ocular abnormalities such as bilateral chorioretinal scars, macular colobomata, significant<br>myopia and nystagmus. Alternatively spliced transcript variants encoding distinct isoforms<br>have been identified for this gene. |
