Target Details		
Target:	COPB1	
Alternative Name:	Coatomer Subunit beta (Copb) (COPB1 Products)	
Background:	This gene encodes a protein subunit of the coatomer complex associated with non-clathrin	

coated vesicles. The coatomer complex, also known as the coat protein complex 1, forms in the

cytoplasm and is recruited to the Golgi by activated guanosine triphosphatases. Once at the

Target Details

	Golgi membrane, the coatomer complex may assist in the movement of protein and lipid
	components back to the endoplasmic reticulum. Alternatively spliced transcript variants have
	been described.
