Target Details

Target:	CNN2
Alternative Name:	Calponin-2 (CNN2 Products)
Background:	The protein encoded by this gene, which can bind actin, calmodulin, troponin C, and tropomyosin, may function in the structural organization of actin filaments. The encoded protein could play a role in smooth muscle contraction and cell adhesion. Several pseudogenes of this gene have been identified, and are present on chromosomes 1, 2, 3, 6, 9, 11, 13, 15, 16,

Target Details

21 and 22. Alternative splicing results in multiple transcript variants encoding different isoforms.
