Background:	This gene encodes a member of the family of voltage-gated potassium (Kv) channel-interacting proteins, which belong to the recoverin branch of the EF-hand superfamily. Members of this

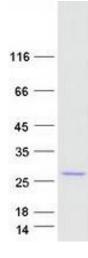

family are small calcium binding proteins containing EF-hand-like domains. They are integral

subunit components of native Kv4 channel complexes that may regulate A-type currents, and

	hence neuronal excitability, in response to changes in intracellular calcium. The encoded
	protein also functions as a calcium-regulated transcriptional repressor, and interacts with
	presenilins. Alternatively spliced transcript variants encoding different isoforms have been
	described.
