## Target Details

Target:	Calsyntenin 1 (CLSTN1)
Alternative Name:	Calsyntenin-1 ( <a href="#">CLSTN1 Products</a> )
Background:	This gene is a member of the calsyntenin family, a subset of the cadherin superfamily. The encoded transmembrane protein, also known as alcadin-alpha, is thought to bind to kinesin-1 motors to mediate the axonal anterograde transport of certain types of vesicle. Amyloid precursor protein (APP) is trafficked via these vesicles and so this protein is being investigated

## Target Details

	to see how it might contribute to the mechanisms underlying Alzheimer's disease. Alternative splicing results in multiple transcript variants.
Molecular Weight:	109.6 kDa
NCBI Accession:	<a href="#">NP_001009566</a>

## Application Details

Application Notes:	Recombinant human proteins can be used for: Native antigens for optimized antibody production Positive controls in ELISA and other antibody assays
