Alternative Name:	Card9 (CARD9 Products)
Background:	The protein encoded by this gene is a member of the CARD protein family, which is defined by
	the presence of a characteristic caspase-associated recruitment domain (CARD). CARD is a
	protein interaction domain known to participate in activation or suppression of CARD
	containing members of the caspase family, and thus plays an important regulatory role in cell

## Target Details

	apoptosis. This protein was identified by its selective association with the CARD domain of BCL10, a postive regulator of apoptosis and NF-kappaB activation, and is thought to function as a molecular scaffold for the assembly of a BCL10 signaling complex that activates NF-kappaB. Several alternatively spliced transcript variants have been observed, but their full-length nature is not clearly defined.
Molecular Weight:	62.1 kDa
NCBI Accession:	NP_434700
Pathways:	Activation of Innate immune Response
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
