Product Details	
Characteristics:	 Recombinant human CBX5 (transcript variant 2) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	CBX5
Alternative Name:	Cbx5 (CBX5 Products)
Background:	This gene encodes a highly conserved nonhistone protein, which is a member of the heterochromatin protein family. The protein is enriched in the heterochromatin and associated
	with centromeres. The protein has a single N-terminal chromodomain which can bind to
	histone proteins via methylated lysine residues, and a C-terminal chromo shadow-domain

Target Details

(CSD) which is responsible for the homodimerization and interaction with a number of
chromatin-associated nonhistone proteins. The encoded product is involved in the formation of
functional kinetochore through interaction with essential kinetochore proteins. The gene has a
pseudogene located on chromosome 3. Multiple alternatively spliced variants, encoding the
same protein, have been identified.
