Target Details

Target:	CCT8
Alternative Name:	Cct8,tcp1 theta (CCT8 Products)
Background:	This gene encodes the theta subunit of the CCT chaperonin, which is abundant in the eukaryotic cytosol and may be involved in the transport and assembly of newly synthesized proteins. Alternative splicing results in multiple transcript variants of this gene. A pseudogene related to this gene is located on chromosome 1.
Molecular Weight:	59.4 kDa

Target Details

NCBI Accession: [NP_006576](#)

Application Details

Application Notes: Recombinant human proteins can be used for:
Native antigens for optimized antibody production
Positive controls in ELISA and other antibody assays

Comment: The tag is located at the C-terminal.
