Target Details

Target:	GGACT
Alternative Name:	a2ld1 (GGACT Products)
Background:	The protein encoded by this gene aids in the proteolytic degradation of crosslinked fibrin by breaking down isodi-peptide L-gamma-glutamyl-L-epsilon-lysine, a byproduct of fibrin degradation. The reaction catalyzed by the encoded gamma-glutamylaminocyclotransferase produces 5-oxo-L-proline and a free alkylamine. Two transcript variants encoding the same protein have been found for this gene.[provided by RefSeq, Aug 2010].
