Target Details	
Target:	AGR2
Alternative Name:	Agr2 (AGR2 Products)
Background:	This gene encodes a member of the disulfide isomerase (PDI) family of endoplasmic reticulum
	(ER) proteins that catalyze protein folding and thiol-disulfide interchange reactions. The
	encoded protein has an N-terminal ER-signal sequence, a catalytically active thioredoxin

domain, and a C-terminal ER-retention sequence. This protein plays a role in cell migration,

cellular transformation and metastasis and is as a p53 inhibitor. As an ER-localized molecular

Target Details

	chaperone, it plays a role in the folding, trafficking, and assembly of cysteine-rich
	transmembrane receptors and the cysteine-rich intestinal gylcoprotein mucin. This gene has
	been implicated in inflammatory bowel disease and cancer progression.
Molecular Weight:	19.8 kDa
