Product Details

Characteristics:	<ul style="list-style-type: none">• Recombinant human AHSP / ERAF protein expressed in HEK293 cells.• Produced with end-sequenced ORF clone

Target Details

Target:	aHSP
Alternative Name:	Ahsp,eraf (aHSP Products)
Background:	This gene encodes a molecular chaperone which binds specifically to free alpha-globin and is involved in hemoglobin assembly. The encoded protein binds to monomeric alpha-globin until it has been transferred to beta-globin to form a heterodimer, which in turn binds to another heterodimer to form the stable tetrameric hemoglobin. Alternative splicing results in multiple transcript variants.
