Target Details

Target:	AMBP
Alternative Name:	Ambp (AMBP Products)
Background:	This gene encodes a complex glycoprotein secreted in plasma. The precursor is proteolytically processed into distinct functioning proteins: alpha-1-microglobulin, which belongs to the superfamily of lipocalin transport proteins and may play a role in the regulation of inflammatory processes, and bikunin, which is a urinary trypsin inhibitor belonging to the superfamily of Kunitz-type protease inhibitors and plays an important role in many physiological and

pathological processes. This gene is located on chromosome 9 in a cluster of lipocalin genes.

Molecular Weight: 37.1 kDa

NCBI Accession: [NP_001624](#)

Application Details

Application Notes: Recombinant human proteins can be used for:
Native antigens for optimized antibody production
Positive controls in ELISA and other antibody assays

Comment: The tag is located at the C-terminal.
