## Target Details

	complex that binds to the X box motif of certain MHC class II gene promoters and activates
	their transcription. Once bound to the promoter, this complex associates with the non-DNA-
	binding factor MHC class II transactivator, which controls the cell type specificity and
	inducibility of MHC class II gene expression. This protein contains ankyrin repeats involved in
	protein-protein interactions. Mutations in this gene have been linked to bare lymphocyte
	syndrome type II, complementation group B. Multiple alternatively spliced transcript variants
	encoding different isoforms have been described for this gene.
Molecular Weight:	27.9 kDa
