## Target Details

Target:	Apolipoprotein D (APOD)
Alternative Name:	Apolipoprotein D (Apo D) ( <a href="#">APOD Products</a> )
Background:	This gene encodes a component of high density lipoprotein that has no marked similarity to other apolipoprotein sequences. It has a high degree of homology to plasma retinol-binding protein and other members of the alpha 2 microglobulin protein superfamily of carrier proteins, also known as lipocalins. This glycoprotein is closely associated with the enzyme lecithin:cholesterol acyltransferase - an enzyme involved in lipoprotein metabolism.

## Target Details

Molecular Weight:	21.1 kDa
