Target Details	
Target:	ATP6V1G3i (ATP6V1G3)
Alternative Name:	Atp6v1g3 (ATP6V1G3 Products)
Background:	This gene encodes a component of vacuolar ATPase (V-ATPase), a multisubunit enzyme that
	mediates acidification of eukaryotic intracellular organelles. V-ATPase dependent organelle
	acidification is necessary for such intracellular processes as protein sorting, zymogen
	activation, receptor-mediated endocytosis, and synaptic vesicle proton gradient generation. V-

Target Details

	ATPase is composed of a cytosolic V1 domain and a transmembrane V0 domain. The V1 domain consists of three A and three B subunits, two G subunits plus the C, D, E, F, and H subunits. The V1 domain contains the ATP catalytic site. The V0 domain consists of five
	different subunits: a, c, c', c" and d. Additional isoforms of many of the V1 and V0 subunit proteins are encoded by multiple genes or alternatively spliced transcript variants. This gene
	encodes one of three G subunit proteins. Transcript variants encoding different isoforms have
	been found for this gene.
