Target Details		
Target:	BCOR	
Alternative Name:	Bcl-6 Corepressor (BCOR Products)	
Background:	The protein encoded by this gene was identified as an interacting corepressor of BCL6, a	

POZ/zinc finger transcription repressor that is required for germinal center formation and may

influence apoptosis. This protein selectively interacts with the POZ domain of BCL6, but not

with eight other POZ proteins. Specific class I and II histone deacetylases (HDACs) have been
shown to interact with this protein, which suggests a possible link between the two classes of
HDACs. Several transcript variants encoding different isoforms have been found for this gene.
A pseudogene of this gene is found on chromosome Y.[provided by RefSeq, Jun 2010].
