Datasheet for ABIN2715239 CRYbB2 Protein (Myc-DYKDDDDK Tag)

Image

Overview

Quantity:	20 µg
Target:	CRYbB2
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CRYbB2 protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	 Recombinant human Beta-crystallin B2 protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	CRYbB2
Alternative Name:	beta-Crystallin b2 (CRYbB2 Products)
Background:	Crystallins are separated into two classes: taxon-specific, or enzyme, and ubiquitous. The latter class constitutes the major proteins of vertebrate eye lens and maintains the transparency and refractive index of the lens. Since lens central fiber cells lose their nuclei during development, these crystallins are made and then retained throughout life, making them extremely stable
	proteins. Mammalian lens crystallins are divided into alpha, beta, and gamma families beta and

Target Details

	gamma crystallins are also considered as a superfamily. Alpha and beta families are further
	divided into acidic and basic groups. Seven protein regions exist in crystallins: four homologous
	motifs, a connecting peptide, and N- and C-terminal extensions. Beta-crystallins, the most
	heterogeneous, differ by the presence of the C-terminal extension (present in the basic group,
	none in the acidic group). Beta-crystallins form aggregates of different sizes and are able to
	self-associate to form dimers or to form heterodimers with other beta-crystallins. This gene, a
	beta basic group member, is part of a gene cluster with beta-A4, beta-B1, and beta-B3. A chain-
	terminating mutation was found to cause type 2 cerulean cataracts.
Molecular Weight:	23.2 kDa
NCBI Accession:	NP_000487
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
Handling	
Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze
	immediately. Only 2-3 freeze thaw cycles are recommended.

Western Blotting
