Target Details	
Target:	BIN1
Alternative Name:	Bin1,amphl (BIN1 Products)
Background:	This gene encodes several isoforms of a nucleocytoplasmic adaptor protein, one of which was initially identified as a MYC-interacting protein with features of a tumor suppressor. Isoforms that are expressed in the central nervous system may be involved in synaptic vesicle endocytosis and may interact with dynamin, synaptojanin, endophilin, and clathrin. Isoforms

	that are expressed in muscle and ubiquitously expressed isoforms localize to the cytoplasm
	and nucleus and activate a caspase-independent apoptotic process. Studies in mouse suggest
	that this gene plays an important role in cardiac muscle development. Alternate splicing of the
	gene results in several transcript variants encoding different isoforms. Aberrant splice variants
	expressed in tumor cell lines have also been described.
