Target Details

Target:	BMP3
Alternative Name:	Bmp3 (BMP3 Products)
Background:	This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta) superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to recruitment and activation of SMAD family transcription factors that regulate gene expression. The encoded preproprotein is proteolytically processed to generate each subunit of the disulfide-linked homodimer. This protein suppresses osteoblast differentiation, and negatively

Target Details

regulates bone density, by modulating TGF-beta receptor availability to other ligands.
