Abstract:	Collagen Type IX Products
Background:	This gene encodes one of the three alpha chains of type IX collagen, which is a minor (5-20 $\%$)
	collagen component of hyaline cartilage. Type IX collagen is usually found in tissues containing
	type II collagen, a fibrillar collagen. Studies in knockout mice have shown that synthesis of the

	alpha 1 chain is essential for assembly of type IX collagen molecules, a heterotrimeric
	molecule, and that lack of type IX collagen is associated with early onset osteoarthritis.
	Mutations in this gene are associated with osteoarthritis in humans, with multiple epiphyseal
	dysplasia, 6, a form of chondrodysplasia, and with Stickler syndrome, a disease characterized
	by ophthalmic, orofacial, articular, and auditory defects. Two transcript variants that encode
	different isoforms have been identified for this gene.
