| Background: | This gene encodes a member of a subclass of the HSP40/DnaJ protein family. Members of this |
|-------------|--|
|             | family of proteins are associated with complex assembly, protein folding, and export. Two  |
|             | transcript variants encoding distinct isoforms have been identified for this gene.         |
