Product Details	
Characteristics:	 Recombinant human DNMT3L (transcript variant 2) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	DNMT3L (TRDMT1)
Alternative Name:	Dnmt3l (TRDMT1 Products)
Background:	CpG methylation is an epigenetic modification that is important for embryonic development, imprinting, and X-chromosome inactivation. Studies in mice have demonstrated that DNA methylation is required for mammalian development. This gene encodes a nuclear protein with similarity to DNA methyltransferases, but is not thought to function as a DNA

Storage Comment:

	methyltransferase as it does not contain the amino acid residues necessary for
	methyltransferase activity. However, it does stimulate de novo methylation by DNA cytosine
	methyltransferase 3 alpha and is thought to be required for the establishment of maternal
	genomic imprints. This protein also mediates transcriptional repression through interaction
	with histone deacetylase 1. Alternatively spliced transcript variants encoding different isoforms
	have been found for this gene.
Molecular Weight:	43.4 kDa
NCBI Accession:	NP_787063
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
