Background:	This gene encodes a single-pass type II membrane protein that is a member of the S9B family
	in clan SC of the serine proteases. This protein has no detectable protease activity, most likely
	due to the absence of the conserved serine residue normally present in the catalytic domain of

	serine proteases. However, it does bind specific voltage-gated potassium channels and alters
	their expression and biophysical properties. Mutations in this gene have been associated with
	asthma. Alternate transcriptional splice variants, encoding different isoforms, have been
	characterized.
