Target Details

Target:	DYNLRB1
Alternative Name:	Dynlrb1 (DYNLRB1 Products)
Background:	<p>This gene is a member of the roadblock dynein light chain family. The encoded cytoplasmic protein is capable of binding intermediate chain proteins, interacts with transforming growth factor-beta, and has been implicated in the regulation of actin modulating proteins.</p> <p>Upregulation of this gene has been associated with hepatocellular carcinomas, suggesting that this gene may be involved in tumor progression. Alternative splicing results in multiple</p>
