Target Details

Target:	ENTPD4
Alternative Name:	Entpd4 (ENTPD4 Products)
Background:	This gene encodes a member of the apyrase protein family. Apyrases are enzymes that catalyze the hydrolysis of nucleotide diphosphates and triphosphates in a calcium or magnesium-dependent manner. The encoded protein is an endo-apyrase and may play a role in salvaging nucleotides from lysosomes. Alternatively spliced transcript variants encoding

Target Details

	multiple isoforms have been observed for this gene, and these isoforms may differ in divalent cation dependence and substrate specificity.
