| Background:                   | This gene belongs to the ephrin receptor subfamily of the protein-tyrosine kinase family. EPH<br>and EPH-related receptors have been implicated in mediating developmental events,<br>particularly in the nervous system. Receptors in the EPH subfamily typically have a single<br>kinase domain and an extracellular region containing a Cys-rich domain and 2 fibronectin type<br>III repeats. The ephrin receptors are divided into 2 groups based on the similarity of their |
