| Overview                      |  |
|-------------------------------|--|
| Quantity:                     | 20 μg  |
| Target:                       | Estrogen Receptor alpha (ESR1)   |
| Protein Characteristics:      | Transcript Variant 1   |
| Origin:                       | Human  |
| Source:                       | HEK-293 Cells  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This Estrogen Receptor alpha protein is labelled with Myc-DYKDDDDK Tag.                      |
| Application:                  | Antibody Production (AbP), Standard (STD)  |
| Product Details               |  |
| Characteristics:              | Recombinant human Estrogen receptor alpha (transcript variant 1) protein expressed in        |
|                               | <ul><li>HEK293 cells.</li><li>Produced with end-sequenced ORF clone</li></ul>                |
| Purity:                       | > 80 % as determined by SDS-PAGE and Coomassie blue staining                                 |
| Target Details                |  |
| Target:                       | Estrogen Receptor alpha (ESR1)   |
| Alternative Name:             | Estrogen Receptor alpha (ESR1 Products)  |
| Background:                   | This gene encodes an estrogen receptor, a ligand-activated transcription factor composed of  |
|                               | several domains important for hormone binding, DNA binding, and activation of transcription. |
|                               | The protein localizes to the nucleus where it may form a homodimer or a heterodimer with     |

## **Target Details**

| estrogen receptor 2. Estrogen and its receptors are essential for sexual development and          |
|---|
| reproductive function, but also play a role in other tissues such as bone. Estrogen receptors are |
| also involved in pathological processes including breast cancer, endometrial cancer, and          |
| osteoporosis. Alternative promoter usage and alternative splicing result in dozens of transcript  |
| variants, but the full-length nature of many of these variants has not been determined.           |
|   |

Molecular Weight:

66 kDa

NCBI Accession:

NP\_000116

Pathways:

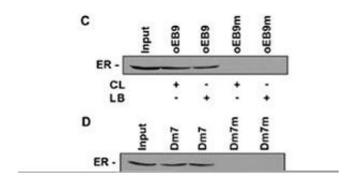

Nuclear Receptor Transcription Pathway, EGFR Signaling Pathway, Retinoic Acid Receptor Signaling Pathway, Intracellular Steroid Hormone Receptor Signaling Pathway, Steroid Hormone Mediated Signaling Pathway, Ribonucleoprotein Complex Subunit Organization, Ribosome Assembly

# **Application Details**

| Application Notes: | Recombinant human proteins can be used for:          |
|--------------------|--|
|                    | Native antigens for optimized antibody production    |
|                    | Positive controls in ELISA and other antibody assays |
| Comment:           | The tag is located at the C-terminal.                |
| Restrictions:      | For Research Use only                                |

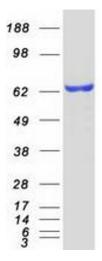

## Handling

| Concentration:   | 50 μg/mL  |
|------------------|---|
| Buffer:          | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.  |
| Storage:         | -80 °C  |
| Storage Comment: | Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze immediately. Only 2-3 freeze thaw cycles are recommended. |

## **Activity Assay**
