Target Details

Target:	FAM55C (NXPE3)
Alternative Name:	Fam55c (NXPE3 Products)
Background:	<p>This gene encodes a member of the neurexophilin family of neuropeptide-like glycoproteins. The encoded protein contains a variable N-terminal domain, a highly conserved neurexophilin and PC-esterase (NXPE) central domain, a short linker region, and a cysteine-rich C-terminal domain. This protein binds alpha neurexins, a group of presynaptic transmembrane receptors</p>

Target Details

that promote adhesion between dendrites and axons. Alternative splicing results in multiple transcript variants.
