| Alternative Name: | Fen1,rad2 (FEN1 Products) |
| Background: | The protein encoded by this gene removes 5\&apos overhanging flaps in DNA repair and |
|  | processes the 5\&apos ends of Okazaki fragments in lagging strand DNA synthesis. Direct |

## Target Details

|  | endonuclease family and is one of ten proteins essential for cell-free DNA replication. DNA secondary structure can inhibit flap processing at certain trinucleotide repeats in a lengthdependent manner by concealing the 5\&apos end of the flap that is necessary for both binding and cleavage by the protein encoded by this gene. Therefore, secondary structure can deter the protective function of this protein, leading to site-specific trinucleotide expansions. |
