## Target Details

Target:	FIGLA
Alternative Name:	Figla ( <a href="#">FIGLA Products</a> )
Background:	This gene encodes a protein that functions in postnatal oocyte-specific gene expression. The protein is a basic helix-loop-helix transcription factor that regulates multiple oocyte-specific genes, including genes involved in folliculogenesis and those that encode the zona pellucida. Mutations in this gene cause premature ovarian failure type 6.
Molecular Weight:	23.9 kDa

## Target Details

NCBI Accession: [NP\\_001004311](#)

## Application Details

Application Notes: Recombinant human proteins can be used for:  
Native antigens for optimized antibody production  
Positive controls in ELISA and other antibody assays

Comment: The tag is located at the C-terminal.

Restrictions: For Research Use only
