## Datasheet for ABIN2721674 CRYGB Protein (Myc-DYKDDDDK Tag)

Image

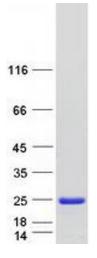

## Overview

Quantity:	20 µg
Target:	CRYGB
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CRYGB protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	<ul> <li>Recombinant human Gamma-crystallin B protein expressed in HEK293 cells.</li> <li>Produced with end-sequenced ORF clone</li> </ul>
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	CRYGB
Alternative Name:	gamma-Crystallin B (CRYGB Products)
Background:	Crystallins are separated into two classes: taxon-specific, or enzyme, and ubiquitous. The latter class constitutes the major proteins of vertebrate eye lens and maintains the transparency and refractive index of the lens. Since lens central fiber cells lose their nuclei during development, these crystallins are made and then retained throughout life, making them extremely stable
	proteins. Mammalian lens crystallins are divided into alpha, beta, and gamma families beta and

	gamma crystallins are also considered as a superfamily. Alpha and beta families are further
	divided into acidic and basic groups. Seven protein regions exist in crystallins: four homologous
	motifs, a connecting peptide, and N- and C-terminal extensions. Gamma-crystallins are a
	homogeneous group of highly symmetrical, monomeric proteins typically lacking connecting
	peptides and terminal extensions. They are differentially regulated after early development.
	Four gamma-crystallin genes (gamma-A through gamma-D) and three pseudogenes (gamma-
	E, gamma-F, gamma-G) are tandemly organized in a genomic segment as a gene cluster.
	Whether due to aging or mutations in specific genes, gamma-crystallins have been involved in
	cataract formation.
Molecular Weight:	20.7 kDa
NCBI Accession:	NP_005201
Application Details	
Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only
Handling	
Concentration:	50 μg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze
	immediately. Only 2-3 freeze thaw cycles are recommended.

Western Blotting
