Datasheet for ABIN2722096 GNAS Protein (Transcript Variant 7) (Myc-DYKDDDDK Tag)

Overview

Image

Uverview	
Quantity:	20 µg
Target:	GNAS
Protein Characteristics:	Transcript Variant 7
Origin:	Human
Source:	HEK-293 Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This GNAS protein is labelled with Myc-DYKDDDDK Tag.
Application:	Antibody Production (AbP), Standard (STD)
Product Details	
Characteristics:	 Recombinant human GNAS / GSP (transcript variant 7) protein expressed in HEK293 cells. Produced with end-sequenced ORF clone
Purity:	> 80 % as determined by SDS-PAGE and Coomassie blue staining
Target Details	
Target:	GNAS
Alternative Name:	Gnas,gsp (GNAS Products)
Background:	This locus has a highly complex imprinted expression pattern. It gives rise to maternally,
	paternally, and biallelically expressed transcripts that are derived from four alternative
	promoters and 5' exons. Some transcripts contain a differentially methylated region
	(DMR) at their 5' exons, and this DMR is commonly found in imprinted genes and

	correlates with transcript expression. An antisense transcript is produced from an overlapping
	locus on the opposite strand. One of the transcripts produced from this locus, and the
	antisense transcript, are paternally expressed noncoding RNAs, and may regulate imprinting in
	this region. In addition, one of the transcripts contains a second overlapping ORF, which
	encodes a structurally unrelated protein - Alex. Alternative splicing of downstream exons is also
	observed, which results in different forms of the stimulatory G-protein alpha subunit, a key
	element of the classical signal transduction pathway linking receptor-ligand interactions with
	the activation of adenylyl cyclase and a variety of cellular reponses. Multiple transcript variants
	encoding different isoforms have been found for this gene. Mutations in this gene result in
	pseudohypoparathyroidism type 1a, pseudohypoparathyroidism type 1b, Albright hereditary
	osteodystrophy, pseudopseudohypoparathyroidism, McCune-Albright syndrome, progressive
	osseus heteroplasia, polyostotic fibrous dysplasia of bone, and some pituitary tumors.
Molecular Weight:	44 kDa
NCBI Accession:	NP_001070957
Pathways:	Thyroid Hormone Synthesis, cAMP Metabolic Process, Myometrial Relaxation and Contraction,
	Embryonic Body Morphogenesis

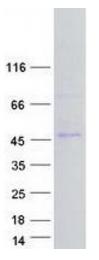

Application Details

Application Notes:	Recombinant human proteins can be used for:
	Native antigens for optimized antibody production
	Positive controls in ELISA and other antibody assays
Comment:	The tag is located at the C-terminal.
Restrictions:	For Research Use only

Handling

Concentration:	50 µg/mL
Buffer:	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Storage:	-80 °C
Storage Comment:	Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze
	immediately. Only 2-3 freeze thaw cycles are recommended.
