Target Details

Target:	HIPK2
Alternative Name:	Hipk2 (HIPK2 Products)
Background:	This gene encodes a conserved serine/threonine kinase that is a member of the homeodomain-interacting protein kinase family. The encoded protein interacts with homeodomain transcription factors and many other transcription factors such as p53, and can function as both a corepressor and a coactivator depending on the transcription factor and its subcellular

Target Details

	localization. Multiple transcript variants encoding different isoforms have been found for this gene.
