Background:	Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between

	gene is intronless and encodes a replication-dependent histone that is a member of the histone
	H2B family. Transcripts from this gene lack polyA tails but instead contain a palindromic
