Target Details

Target:	HMX2
Alternative Name:	Hmx2 (HMX2 Products)
Background:	The protein encoded by this gene is a member of the NKL homeobox family of transcription factors. Members in this family are of ancient origin and play an important role in organ development during embryogenesis. A related mouse protein plays a role in patterning of inner ear structures. In humans, variations in a region containing this gene have been associated with inner ear malformations, vestibular dysfunction, and hearing loss.

Target Details

Molecular Weight:	29.4 kDa
NCBI Accession:	NP_005510
