#### Target Details

Target:	HVCN1
Alternative Name:	Hvcn1,vsop ( <a href="#">HVCN1 Products</a> )
Background:	This gene encodes a voltage-gated protein channel protein expressed more highly in certain cells of the immune system. Phagocytic cells produce superoxide anions which require this channel protein, and in B cells this same process facilitates antibody production. This same channel protein, however, can also regulate functions in other cells including spermatozoa.

## Target Details

Multiple transcript variants encoding different isoforms have been found for this gene.

Molecular Weight: 31.5 kDa

NCBI Accession: [NP\\_115745](#)

Pathways: [Proton Transport](#)

## Application Details

Application Notes: Recombinant human proteins can be used for:  
Native antigens for optimized antibody production  
Positive controls in ELISA and other antibody assays

Comment: The tag is located at the C-terminal.
