Target Details	
Target:	KCNIP4
Alternative Name:	Kcnip4 (KCNIP4 Products)
Background:	This gene encodes a member of the family of voltage-gated potassium (Kv) channel-interacting proteins (KCNIPs), which belong to the recoverin branch of the EF-hand superfamily. Members of the KCNIP family are small calcium binding proteins. They all have EF-hand-like domains, and differ from each other in the N-terminus. They are integral subunit components of native

Target Details

Kv4 channel complexes. They may regulate A-type currents, and hence neuronal excitability, in
response to changes in intracellular calcium. This protein member also interacts with
presenilin. Multiple alternatively spliced transcript variants encoding distinct isoforms have
been identified for this gene.

Molecular Weight: 21.8 kDa
