Target Details

Target:	LHFP
Alternative Name:	Lhfp (LHFP Products)
Background:	<p>This gene is a member of the lipoma HMGIC fusion partner (LHFP) gene family, which is a subset of the superfamily of tetraspan transmembrane protein encoding genes. This gene is fused to a high-mobility group gene in a translocation-associated lipoma. Mutations in another LHFP-like gene result in deafness in humans and mice. Alternatively spliced transcript variants have been found however, their full-length nature is not known.</p>
