## Datasheet for ABIN2725179 MAGEA5 Protein (Myc-DYKDDDDK Tag)

## Overview

| Quantity:                     | 20 µg  |
|-------------------------------|--|
| Target:                       | MAGEA5   |
| Origin:                       | Human  |
| Source:                       | HEK-293 Cells  |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This MAGEA5 protein is labelled with Myc-DYKDDDDK Tag.   |
| Application:                  | Antibody Production (AbP), Standard (STD)  |
| Product Details               |  |
| Characteristics:              | Recombinant human MAGE-5 protein expressed in HEK293 cells.                                    |
|                               | Produced with end-sequenced ORF clone  |
| Purity:                       | > 80 % as determined by SDS-PAGE and Coomassie blue staining                                   |
| Target Details                |  |
| Target:                       | MAGEA5   |
| Alternative Name:             | Mage-5 (MAGEA5 Products)   |
| Background:                   | This gene is a member of the MAGEA gene family. The members of this family encode proteins     |
|                               | with 50 to 80 $\%$ sequence identity to each other. The promoters and first exons of the MAGEA |
|                               | genes show considerable variability, suggesting that the existence of this gene family enables |
|                               | the same function to be expressed under different transcriptional controls. The MAGEA genes    |
|                               | are clustered at chromosomal location Xq28. They have been implicated in some hereditary       |

## Target Details

Storage Comment:

|                     | disorders, such as dyskeratosis congenita. This MAGEA gene encodes a protein that is C-<br>terminally truncated compared to other family members, and this gene can be alternatively<br>interpreted to be a pseudogene. The protein is represented in this Gene record in accordance<br>with the assumed protein-coding status defined in the literature. Read-through transcription<br>exists between this gene and the upstream melanoma antigen family A, 10 (MAGEA10) gene. |
|---------------------|---|
| Molecular Weight:   | 12.8 kDa  |
| NCBI Accession:     | NP_066387   |
| Application Details |   |
| Application Notes:  | Recombinant human proteins can be used for:   |
|                     | Native antigens for optimized antibody production   |
|                     | Positive controls in ELISA and other antibody assays  |
| Comment:            | The tag is located at the C-terminal.   |
| Restrictions:       | For Research Use only   |
| Handling            |   |
| Concentration:      | 50 μg/mL  |
| Buffer:             | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.  |
| Storage:            | -80 °C  |
|                     |   |

immediately. Only 2-3 freeze thaw cycles are recommended.

Store at -80°C. Thaw on ice, aliquot to individual single-use tubes, and then re-freeze

Western Blotting
